

# Is sharing and accessing data a challenge?

## Without detailed data, what is your analysis missing?

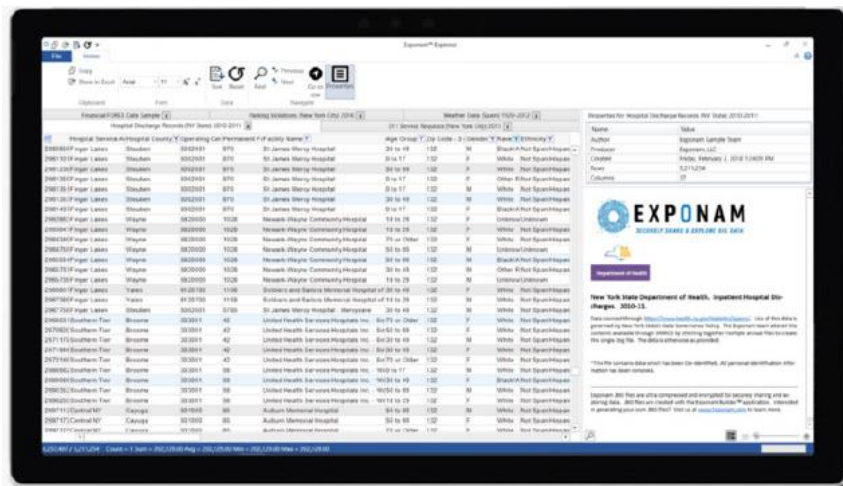

Visualization tools and summary reports are great. But, as the saying goes, “the devil is in the ...” Sometimes, you need the data for detailed analysis when you’re not connected and to share specifics when you’re back online.

With .BIG™ files, you can securely download millions or even 100s of millions of rows easily and quickly – from within your existing tools (ERP, CRM, BI/Visualization platform, Custom Databases).

Unlike other data files, .BIG files download quickly. .BIG files are small – 24x smaller than CSVs (and 3x smaller than zipped CSV files). .BIG files won’t clog your email – making them great for sending to partners.

The Exponam Explorer™ application enables you to instantly view, filter, and sort .BIG files. You can find data and transfer it seamlessly to MS Excel.

Or, keep using the same BI tools you do in the office – but disconnected, from the .BIG data file on your laptop.

And best of all, .BIG files are ultra secure – so your data is safe – even outside your office. Send it to colleagues, partners, or vendors – it’s secured with industry leading encryption and access controls.
