

THE BIGGEST LIE SAAS VENDORS TELL THEMSELVES:

OUR USERS NEVER EXTRACT

DETAILED DAT

Users do all their analysis within our product

FACT: Users download data - to send to external parties; for further analysis; to upload elsewhere. AND YOU provide the ability to download CSVs. But when faced with downloading more than a few thousand rows of data, you offer no solution. **"User self-service" becomes "ask IT."**

We understand: Downloading millions of rows is hard

- Too large for a CSV
- Can't open the file in Excel or Sheets
- Corporate security concerns

THE ANSWER IS **EXPONAM**

With Exponam .BIG files, your users can easily download dataset with 100s of millions of rows.

- Download .BIG files as easily as downloading CSVs
- Access millions of rows instantly in a spreadsheet
- Easily filter and sort data
- > One click push to Excel

- Fully secure data
- Ultra-compressed
- Files are immutable, provenance and lineage are tracked
- Files are stamped with originating system details extending your reach to all who interact with the files

You do the heavy lifting –making data accessible; providing visualizations; uncovering insights. Let us help you provide true user self-service for secure, large data download, sharing and exploration.
